

Adani's solar power project is unable to find any guaranteed customer

Adani's green energy project that is worth \$6 billion is unable to find the guaranteed customers for the project. The company may be exposed to high financial risk. Adani Green and Solar Energy Corporation of India (SECI) possess no legal or financial responsibility to support the project if SECI will not be able to find the buyers. 2GW of electricity generation will come by 2022, and the rest of the power generation capacity will be added in 2GW increments around 2025.
